French Hat Manufactory,
17, Market-street

GEORGE CHISHOLM, Draper, Mercer, Haberdasher, Hosier, &c., 253, Pitt-street.
G. C. begs to intimate to his customers that he has made a great reduction in the price of the whole of his stock of balmaines and de laines.
Balmaine dresses, all wool, 12 yard lengths, 7s. 6d. and 8s. 6d. the dress
De laines, very rich styles, 7s. 6d., 8s. 6d., 9s. 6d.
2518

GEORGE CHISHOLM has much pleasure in informing his patrons that his stock of Shawls has been greatly increased during the last week. In addition to his former stock, he has now just opened a very choice selection of—
French filled shawls
Also, a lot of very beautiful real barege scarfs, four yards long by two yards wide, commencing at fifteen shillings and sixpence each.
Bergre shawls, black, white, or coloured grounds, 21 yards square, 12s. 6d. each. 2518

GEORGE CHISHOLM wishes to inform the public that the whole of his stock of printed muslin dresses are now reduced to nearly one-half their original price.
Liddiard's printed muslins, 3s. 11d. the dress, quite fast. 2519

VISITERS.

GEORGE CHISHOLM has received (ex Prince of Wales) a case of the above garments, from one of the first London Mantua-makers, amongst which will be found styles and shapes to suit every figure; and on account of the very large stock G. C. has now by him, he has determined on selling the whole of them at a barely remunerating profit. 2520

HOSIERY AND GLOVES.

THESE Departments have been selected with the greatest possible care, and are now quite complete.
G. C. would particularly call the attention of gentlemen to his stock of—
White merino shirts
Indian cashmere ditto
Spun silk ditto
White merino drawers and pants
Indian cashmere ditto
The above goods are peculiarly fine, and well adapted for a warm climate.
Every size and make in children's socks.
NOTICE.—A single dozen sold at the whole-sale price.
Address: **GEORGE CHISHOLM**, Draper, &c., 253, Pitt-street, Sydney.

R. B. COOKE, Wholesale and Export Confectioner, Hunter-street, 3438 Second door from High-street.

POINT PIPER ESTATE.

FOR SALE.—This delightful Estate is now in the market. Intending purchasers can have a choice of sites, not to be equalled in the colony, and at a price much below that at which adjoining property, with not a tithe of its advantages has recently been sold for. Plans, by kind permission, are on view at the Auction Mart of Messrs. Mort and Brown, Mr. Samuel Lyons, and Mr. G. A. Lloyd.

CLEVELAND HOUSE GROUNDS.

FOR SALE.—Spacious and highly situated Building Allotments, in Elizabeth and Devonshire streets, near the Railway Terminus, originally forming a portion of Cleveland House Grounds. As immediate payment for either of the above properties is not an object, it will be a study to render the terms of payment such as to meet the convenience of purchasers.

TO LET.

To let, on lease, Land at Rushcutters' Bay, Double Bay, South Head Road, Botany, and the North Shore—amongst which are sites suitable alike for market gardeners and suburban residences. Also, a few Country Properties at a nominal rental.
Apply to the undersigned, No. 5, Park-street, where plans of the properties may be seen. 2299

FOR SALE.

THE undermentioned PROPERTIES, viz.:—Two Allotments in the City of Sydney, situated in Cumberland and Gloucester streets.

These Allotments have a frontage of forty-five feet to each of the above-named streets, and will be sold either together or separately, as may be desired.

TITLE.—Grant from the Crown to the vendor **QUIN-RENT ENDEMNED.**

About 30 Acres of Land at the junction of the Great North Road with the Parramatta Road, commencing at Iron Cove Bridge, and bounded on the south-west by the Great North Road; on the north by Iron Cove Road; on the south-east by Iron Cove Creek; and on the east by Dr. Ramsey's Estate of Dobroyd.

An Eligible Allotment of Land in Gipps Town, on the Parramatta Road, having a frontage thereof of 100 feet (which is the southern boundary), bounded on the west by Mrs. Baine's property to the extent of 294 feet; on the north by a line east 100 feet; and on the east by Mr. Harris' property to the extent of 300 feet.

Two Allotments adjoining the above, also in Gipps Town, having a frontage to Queen's Road on the north of 200 feet, and bounded on the east by a line south 250 feet; on the south by a line west 200 feet; and on the west by a line north 250 feet to the Queen's Road.

Land at Moruya Harbour, consisting of 15 Acres, or thereby, in Garsland Town, County St. Vincent, commencing at Burnett-street, by a line bearing south to Moruya Harbour, and on the south by the line of high water mark, as per plan.
Apply to **JOHN GRAHAM**, 2, Jamison-street, Sydney, February 6. 2745

CLYDESDALE.

FOR SALE OR LEASE.

THAT well-known Estate called "Clydesdale," situated on the banks of the South Creek, on the Richmond Road, 20 miles from Sydney, 5 from Windsor, and 14 from Parramatta.

The Estate, consisting of 900 acres, is fenced in and divided into securely enclosed paddocks, and has all the conveniences required in a farming establishment. 500 acres are cleared and fit for cultivation.

As a well-watered Estate, it is second to none in the Colony; there is an excellent garden of about 3 acres, well stocked with fruit trees.

The house (which is nearly surrounded by a stone flagged verandah 9 feet in width) is built of brick, of two stories, and contains on the ground floor 6 rooms, besides kitchen, laundry, wash-house, dairy, and two sleeping rooms for servants, and on the upper floor eleven bed rooms.

The brick out-buildings consist of a large stabled stable, coach-house, extensive loft over the stable and coach-house, a bake-house, and rooms for the residences of several labouring families.

There are also other necessary buildings. The slab out-buildings consist of two stores, an office, a granary over the stores, garden hut, and other huts, barn, and very extensive sheds for carts, &c.

All the buildings are shingled. St. Philip's Church is in the midst of the Estate, thereby materially adding to its convenience. To a clergyman intending to keep a school, the place would be invaluable.

For terms and particulars inquire at the office of the Australian Trust Company, No. 11, Charlotte place. 2804

TO BE SOLD, the Estate of **CHESTER HUNT PARK**, on the Hunter, 10 miles from Singleton, containing 1000 acres, fenced in and divided into paddocks; as also the lease for 21 years of about 1000 acres of Church and School Lands adjoining, the whole commanding a frontage of nearly 3 miles to the river. The house contains abundant room for a large family, and all the usual offices, and the vineyard, which is first-rate, consists of 8 acres, and though not yet in full bearing, will produce from 1000 to 2000 gallons of wine. Any gentleman having stock to the northward and requiring such an establishment will seldom find a more attractive or convenient farm. Application to be made to Captain Rossall, Ravensworth, Singleton. 2908

FOR SALE BY PRIVATE CONTRACT.

3104 ACRES, County of St. Vincent, St. George's Basin, purchased from the Crown by Hughes and Hosking.

1280 Acres, county of St. Vincent, Broulee, commencing at the north-east corner of Flanagan's 2650 acres, purchased from the Crown by Hughes and Hosking.

1170 Acres, county of St. Vincent, Broulee, now in the occupation of Mr. Benjamin Marshall.

2 Allotments at Canterbury, near the Company's Sugar Works.

4 Cottages in Kent-street, having a frontage to that street of 94 feet, with a depth of 112 feet, adjoining Captain Viles' Building, and at present producing a rental of £50 per annum. These Cottages will be sold together or separately.

220 Acres county of Cumberland, district of Cahirra, formerly the property of Wm. Fendray.

Plans of these properties, and all further information, may be obtained at the Bank of New South Wales.

October 24.
Victoria by the Grace of God of the United Kingdom of Great Britain and Ireland Queen Defender of the Faith, &c., &c.

To the Widow and to the next of kin of John Humphreys late of Bathurst in the colony of New South Wales carrier deceased.

GREETING:—

WHEREAS it hath been represented unto our Supreme Court of New South Wales by the proctor of Thomas Kessy a creditor of the said deceased that the said John Humphreys late of Bathurst in the said colony departed this life on or about the tenth day of December one thousand eight hundred and fifty having at the time of his death possessor of chattels and credits in the colony of New South Wales carrier deceased.

We do therefore hereby peremptorily cite you and each of you to appear personally or by your proctor duly constituted before our said Court at the Court House in King-street Sydney on the 12th day of March next at the hour of ten o'clock in the forenoon of the same day and there to abide if occasion shall require during the sitting of the said Court and then and there to accept or refuse letters of administration of all and singular the goods chattels and credits of the said deceased or otherwise to show sufficient cause if you or either of you have or know any why the same should not be committed to the said Thomas Kessy a creditor of the said deceased on giving sufficient security and further to do and receive all to law and justice shall appertain under pain of such letters being granted to the said Thomas Kessy as a creditor of the said deceased.

Witness the Honourable Sir Alfred Stephen Knight the Chief Justice of our said Court this third day of February in the fourteenth year of our reign.

S. P. T. GREGORY (s.)
Prothonotary and Registrar of the Supreme Court.
L. O. D. JAMES Sydney, Agent for James Walsh, Proctor, for Thomas Kessy, Bathurst. 2904

THE undersigned are cash buyers of Wool, or will make advances on Wool consigned to their friends in London or Liverpool.
MACKINTOSH AND HUNT.

MISCELLANEOUS EXTRACTS.

THE LION.

(From Cumming's South Africa.)

The night of the 19th was to me rather a memorable one, as being the first on which I had the satisfaction of hearing the deep-toned roar of the lion's roar. Although there was no one near to inform me by what hour the haughty and impressive sounds which echoed through the wilderness were produced, I had little difficulty in divining. There was no mistake about it; and on hearing it, I at once knew, as well as if accustomed to the sound from my infancy, that the appalling roar which was uttered within half a mile of me, was no other than that of the mighty and terrible king of beasts. Although the dignified and truly monarchical appearance of the lion has long rendered him famous amongst his fellow quadrupeds, and his appearance and habits have often been described by slyer pens than mine, nevertheless, I consider that a few remarks, resulting from my own personal experience, formed by a tolerably long acquaintance with him both by day and by night, may prove uninteresting to the reader. There is something so noble and imposing in the presence of the lion, when seen walking with dignified self-possession, free and undaunted, on his native soil, that no description can convey an adequate idea of his striking appearance. The lion is exquisitely formed by nature for the predatory habits which he is destined to pursue. Combining in comparatively small compass the qualities of power and agility, he is enabled, by means of the tremendous machinery with which nature has gifted him, easily to overcome and destroy almost every beast of the forest, however superior to him in weight and stature.

Though considerably under four feet in height, he has little difficulty in dashing to the ground and overcoming the lofty and apparently powerful giraffe, whose neck he reaches above the trees of the forest, and whose skin is nearly an inch in thickness. The lion is the constant attendant of the vast herds of buffaloes which frequent the interminable forests of the interior; and a full grown one, so long as his teeth are unbroken, generally proves a match for an old bull buffalo, which in size and strength greatly surpasses the most powerful breed of English cattle: the lion also preys on all the larger varieties of the antelope, such as the kudu, the reedbuck, the topi, the zebra, which is met with in large herds throughout the interior, is also a favourite object of his pursuit.

Lions do not refuse, as has been asserted, to feast upon the venison that they have not killed themselves. I have repeatedly discovered lions of all ages which had taken possession of, and were feasting upon, the carcasses of various game quadrupeds which had fallen before my rifle. The lion is very generally diffused throughout the secluded parts of Southern Africa. He is, however, nowhere met with in great abundance, it being very rare to find more than three, or even two, families of lions frequenting the same district and drinking at the same fountain. When a greater number were met with, I remarked that it was owing to long protracted droughts, which, by drying nearly all the fountains, had compelled the game of various districts to crowd the remaining springs, and the lions, according to their custom, followed in the wake. It is a common thing to come upon a full-grown lion and lioness associating with three or four large young ones nearly full-grown; at other times full-grown males will be found associating and hunting together in a happy state of friendship; two, three, and four full-grown male lions may thus be discovered conversing together.

The male lion is adorned with a long, rank, shaggy mane, which in some instances almost sweeps the ground. The colour of these manes varies, some being very dark, and others of a golden yellow. This appearance has given rise to a prevailing opinion among the Boers that there are two distinct varieties of lions, which they distinguish by the respective names of "Schwarz fore life" and "Chiel fore life"; this idea, however, is erroneous. The colour of the lion's mane is generally influenced by his age. He attains his mane in the third year of his existence. I have remarked that at first it is of a yellowish colour; in the prime of life it is blackest, and when he has reached many years, but still is in the full enjoyment of his power, it assumes a yellowish grey, pepper-and-salt sort of colour. These old fellows are cunning and dangerous, and most to be dreaded. The females are utterly destitute of a mane, being covered with a short, thick, glossy coat of tawny hair. The mane and coats of lions frequenting open-lying districts utterly destitute of trees, such as the borders of the great Kalahari desert, are more rank and handsome than those inhabiting forest districts.

One of the most striking things connected with the lion is his voice, which is extremely grand and peculiarly striking. It consists at times of a low, repeated five or six times, ending in faintly audible sighs; at other times he starts the forest with loud, deep-toned solemn roars, repeated five or six times in quick succession, each increasing in loudness to the third or fourth, when his voice dies away in five or six low, muffled sounds, very much resembling distant thunder. At times, and not unfrequently, a troop may be heard roaring in concert, one assuming the lead, and two, three, or four more regularly taking up their part like persons singing a catch. Like our Scottish stags at the rutting season, they roar loudest in cold, frosty nights; but on no occasions are their voices to be heard in such perfection, or so intensely powerful, as when two or three strange troops of lions approach a fountain to drink at the same time. When this occurs, every member of each troop sounds a bold roar of defiance at the opposite parties; when one roars, all roar together, and each seems to vie with his comrades in the intensity and power of his voice. The power and grandeur of these nocturnal forest concerts is inconceivably striking and pleasing to the hunter's ear. The effect, I may remark, is greatly enhanced when the hunter happens to be situated in the depths of the forest, at the dead hour of midnight, accompanied by any attendant, and ensconced within twenty yards of the fountain which the surrounding troops of lions are approaching. Such has been my situation many scores of times; and though I am allowed to have a tolerably good taste for

music, I consider the catches which I was then regarded as the sweetest and most natural I ever heard.

As a general rule, lions roar during the night; their sighing moans commencing as the shades of evening envelope the forest, and continuing at intervals throughout the night. In distant and secluded regions, however, I have constantly heard them roaring loudly as late as nine and ten o'clock on a bright sunny morning. In hazy and rainy weather they are to be heard at every hour in the day, but their roar is subdued. It often happens that when two strange male lions meet at a fountain, a terrific combat ensues, which not unfrequently ends in the death of one of them. The habits of the lion are strictly nocturnal. During the day he lies concealed beneath the shade of some low bushy tree, or wide spreading bush, either in the level forest or on the mountain side. He is also partial to lofty reeds or fields of long rank yellow grass, such as occur in low-lying valleys. From these haunts he sallies forth when the sun goes down, and commences his nightly prowling. When he is successful in his quest, and has secured his prey, he does not roar much that night, only uttering occasionally a few low moans that is provided no intruder approach him, otherwise the case would be very different.

Lions are ever most active, daring, and presuming in dark and stormy nights, and consequently, on such occasions the traveller ought more particularly to be on his guard. I remarked a fact connected with the lions' hour of drinking peculiar to themselves; they seemed unwilling to visit the fountains with good moonlight. Thus, when the moon rose early, the lions deferred their hour of watering until late in the morning; and when the moon rose late, they drank at a very early hour in the night. By this acute system many a gaily lion saved his bacon, and is now luxuriating in the forest of South Africa, which has hitherto been fallen by the barrels of my "Wesley Richards." Owing to the tawny colour of the coat with which nature has robed him, he is perfectly invisible in the dark; and although I have often heard them loudly lapping the water under my very nose, not twenty yards from me, I could not possibly make out so much as the outline of their forms. When a thirsty lion comes to water, he stretches out his massive sum, lies down on his breast, and makes a loud lapping noise in drinking, not to be mistaken. He continues lapping up the water for a long while, and four or five times during the proceeding he passes for half a minute, as if to take breath. One thing conspicuous about them is their eyes, which, in a dark night, glow like two balls of fire. The female is more fierce and active than the male, as a general rule. Lionesses which have never had young are much more dangerous than those which have. At no time is the lion so much to be dreaded as when his partner has got small young ones. At that season he knows no fear, and, in the coolest and most intrepid manner, he will face a thousand men. A remarkable instance of this kind came under my own observation which confirmed the reports I had before heard from the natives. One day, when at elephant-hunting in the territory of the "Baselaks," accompanied by two hundred and fifty men, I was astonished suddenly to behold a majestic lion, slowly and steadily advancing towards us with a dignified and undaunted bearing, the most noble and imposing that can be conceived. Leading his tail from side to side, and growing haughtily, his terribly expressive eyes resolutely fixed upon us, displaying a show of ivory well calculated to inspire terror amongst the timid "Baselaks," he approached. A headlong flight of two hundred and fifty men was the immediate result; and, in the confusion of the moment, four couples of my dogs, which they had been leading, were allowed to escape in their coup.

These instantly faced the lion, who, finding that by his bold bearing he had succeeded in putting his enemies to flight, now became solicitous for the safety of his little family, with which the lioness was retreating in the back ground. Facing about he followed after them with a haughty and independent step, growing fiercely at the dogs which trotted along on either side of him. Three troops of elephants having been discovered a few minutes previous to this, upon which I was marching for the attack, I, with the most heartfelt reluctance, reserved my fire. On running down the hill side, to endeavour to recall my dogs, I observed, for the first time, the retreating lioness with four cubs. About twenty minutes afterwards two noble elephants repaid my forbearance.

Among Indian Nimrods a certain class of royal tigers is dignified with the appellation of "man-eaters." These are tigers, which, having once tasted human flesh, show a predilection for the same, and such characters are very naturally feared and dreaded among the natives. Elderly gentlemen of similar tastes and habits are occasionally met with among the lions in the interior of South Africa, and the danger of such neighbours may be easily imagined. I account for lions first acquiring this taste in the following manner: The Bechuana tribes of the far interior do not bury their dead, but unceremoniously carry them forth, and leave them lying exposed in the forest or on the plain, a prey to the lion and hyena, or the jackal and vulture; and I can readily imagine that a lion, having thus once tasted human flesh, would have little hesitation, when opportunity presented itself, of springing upon and carrying off the unwary traveller or "Bechuana" inhabiting his country. Be this as it may; man-eaters occur; on my fourth hunting expedition a horrible tragedy was acted out in the vicinity of my little lonely camp by one of these formidable characters, which deprived me, in the far wilderness, of my most valuable servant. In finding up these few observations on the lion, which I trust will have been tiresome to the reader, I may remark that lion-hunting, under any circumstances, is decidedly a dangerous pursuit. It may, nevertheless, be followed, to a certain extent, with comparative safety by those who have, naturally, a turn for that sort of thing. A recklessness of death, perfect coolness and self-possession, an acquaintance with the disposition and manners of lions, and a tolerable knowledge of the use of the rifle, are indispensable to him who would shine in the overpoweringly exciting pastime of hunting this justly celebrated king of beasts.

PONTIFICAL NEWS.

(From Punch.)
His Eminence Cardinal Pantheon, Legate of His Holiness, has arrived at the Golden Cross, Charing-cross; and is bearer of a message to the Chief of the British Government, demanding the usual acknowledgment on the part of the Sovereign of Great Britain, which has been always and from all time a fact of the Holy See. In case of obstinate recusancy (which is not apprehended) his Eminence is commissioned to proclaim the Prince of Lucena as Sovereign of these islands, the Prince being direct and undoubted descendant of those legitimate monarchs of England who were driven by rebellion, the one to death, and the other to exile, from the neighbouring Palace of Whitehall.

The Holy Father has appointed Monsignor Snooks, Lord Chancellor of England, vice Lord Truro, who has not resigned. But the office of Lord Chancellor was always held by ecclesiastics in England in the good times of the Church, and Monsignor Snooks will take his seat in the Chancellor's Court at the commencement of next term.—*Dribble.*

His Holiness has conferred upon Monsignor Snucci, the new Lord Chancellor of England, the title of Marquis Saint Bartholomew's of Smithfield.—*Diary di Roma.*

Lodgings have been taken in the New cut, Lambeth, for his Grace the Lord Archbishop of Vauxhall, until the (titular) Archbishop of Canterbury has vacated the palace which belongs of right to the primates of England.

Mr. Sumner has been offered the place of parish beadle, which it is believed he will accept.

The Right Rev. Dominic Barefoot, Bishop of Paddington, looked over the outside of London-house, in St. James's-square, yesterday, and thence proceeded by the omnibus to Fulham, his lordship's residence near London.

Until the palace at Fulham is ready for his lordship's accommodation, the reverend prelate has engaged a temporary residence, No. 42, River lane, Putney, over the nonnismen's, where the faithful who wish to attend his levees will please to ring the two-pair bell.

Very few alterations will be requisite in the churches of the archdeaconry of Finchley, which will be given over to the orthodox clergy at the new year. It has been judged, however, that the ornaments of the church of St. Barnabas are of so exceedingly antiquated and cumbersome a nature, that the ecclesiastical architects of H. H. are engaged in whitewashing the interior of the building, and simplifying the arrangements, so as to suit the present time.

On Wednesday morning last, the statue of St. Mary, opposite the Post Office, began winking its left eye in a convincing manner, which 33 letter-carriers and two commercial gentlemen, staying at the Bull and Mouth, were instantly converted.

Mr. Munster and Colonel Sibthorp have signified their intention to become Chaplains Extraordinary, and it is confidently reported that the members for Aldbury and Oldham are in retreat previous to receiving the tonsure.

The Cathedral Church of St. Peter, in Westminster, will, of course, be restored and assumed by its rightful proprietors; but it is not intended to make any ecclesiastical use of the large heathen building, erected on the site of the ancient Basilica of Saint Paul, on Ludgate-hill, opposite to Dalby's tea warehouse. A grand and splendid monument is in treaty for it, and will exhibit her ingenious was works there, at a price little differing from the present charges.

The residence of the Primate of England will be opposite the New Cathedral Church of St. George's-in-the-Fields; and the Palace of Bedlam will be prepared for him.

ATLANTIC WAVES.

(From Dispatch Words.)
On a brisk March morning, in the year 1848, the brave steam ship *Hibernia* rolled about in the most intemperate fashion on the broad Atlantic, in north latitude 51, and west longitude 30—she was bound to London, and had on board the grandeur of the waters was a mockery, the fine bearing of the ship only a delusion and a snare. Everything was made dark and gloomy; if a passenger lay left a toothpick on one of the seats, he would assuredly have found it lashed to a near railing. Rope was coiled about every imaginable item; and water dripped from every spar of the gallant vessel. Now it seemed as though she were travelling along through a brilliant gallery, flanked on either side by glittering walls of water; now she climbed one of the crested walls, and an abyss, dark and terrible as the famous Medusa, which can't be found anywhere, yawned to receive her. The snorts of the engine seemed to defy the angry waters; and occasionally when a monster wave coiled about the ship, and thundered against her, she staggered for a moment, only to renew the battle with fresh energy.

There was a monster in British form actually on deck—not braving, it was said, but tempting the storm to sweep him into eternity. He astonished even the ship's officers. The cook did not hesitate to venture a strong opinion against the sanity of a man who might, if he chose, be snugly ensconced in the cabin out of harm's way, but who would remain upon deck in momentary danger of being blown overboard. The cook's theory was not ill supported by the subject of it; for he was continually placing himself in all manner of odd places and grotesque postures. Sometimes he scrambled up on the cuddy roof; then he rolled down on the saloon deck; now he got himself blown up on the paddle-box; that was not high enough for him, for when the vessel sunk into a trough of the sea, he stood on tip-toe, trying to look over the nearest wave. A consultation was held in the cuddy, and a resolution was unanimously passed that the amateur of wind and water (which burst over him every minute) was either an escaped lunatic or—a college professor.

It was resolved, *non con.*, that he was the latter; and from that moment nobody was surprised at anything he might choose to do, even while the *Hibernia* was labouring in what the mate was pleased to call the most "lively" manner. The Professor, however, to the disgust of the sufferers below, who thought it was enough to feel the height of the waves, without going to the trouble of measuring them, pursued his observations in the face of the contempt of the official concave observation.

tioned. He took up his position on the cuddy roof, which was exactly twenty-three feet three inches above the ship's line of flotation, and there watched the mighty mountains that sported with the brave vessel. He was anxious to ascertain the height of these majestic waves, but he found that the crests rose so far above the horizon from the point where he was standing, that it was utterly impossible, without gaining a greater height for observation, that he could arrive at any just estimate on the subject. His observations from the cuddy-roof proved, however, beyond a doubt, that the majority of these rolling masses of water attained a height of considerably more than twenty-four feet, measuring from the trough of the sea to the crests of the waves. But the Professor was not satisfied with this negative proof, and in the pursuit of his interesting inquiry did not feel inclined to be baffled. It is impossible to know what the secret thoughts of the man at the wheel were, when the valiant observer announced his intention of making the best of his way from the cuddy-roof to the larboard paddle box. Now he was to be seen tumbling about with the motion of the ship; at one moment clinging to a chain-box; at the next, throwing himself into the arms of the second mate. Now he is buried in spray, and a few minutes afterwards his spare form is seen clinging to the rails which connect the paddle boxes.

Despite the storm without, a calm mathematical process is going on within the mind of that ardent observer. The Professor knew he was standing at a height of 24 feet 9 inches above the flotation mark of the ship; and allowing 5 feet 6 inches the height of his eye, he found the elevation he had attained to be altogether 30 feet 3 inches. He now waited till the vessel subsided fairly for a few minutes into the trough of the sea in an even and upright position, when the nearest approaching wave had its maximum altitude. Here he found also, that at least one-half part of the wave intercepted by a considerable elevation his view of the horizon. He declared that he frequently observed long ranges extending 100 yards on one or both sides of the ship—the sea then coming right aft—which rose so high above the visible horizon, as to form an angle estimated at two to three degrees when the distance of the wave's crest was about 100 yards off. This distance would add about 13 feet to the level of the eye. This immense elevation occurred about every sixth wave. Now and then, when the course of a gigantic wave was imperceptibly interfered with by another liquid giant, and they thundered together, their breaking crests would shoot upward at least ten or fifteen feet higher—about half the height of the Monument—and then, down down might flood upon the poor Professor, in revenge for his attempt to measure their majesties. No quantity of salt water, however, could wash him from his post, till he had satisfactorily proved, by accurate observation, that the average wave which passed the vessel was fully equal to the height of his eye—or 30 feet 3 inches—and that the mean highest waves, not including the fighting or broken waves, were about 45 feet above the level of the hollow occupied at the moment by the ship.

Towards night the wind increased to a hurricane, and the ship trembled like a frightened child before the terrible coast of the elements. Night, with her pall, closed in the scene; it was a wild and solemn scene. Towards morning the wind abated. For thirty hours a violent north-west gale had swept over the heaving bosom of the broad Atlantic.

This reflection hastened the dressing and breakfasting operations of the Professor, who tumbled up on deck at about ten o'clock in the morning. The storm had been subdued for several hours, and there was a visible decrease in the height of the waves. He took up his old position on the cuddy-roof, and soon observed, that, even then, when the sea was comparatively quiet, ten waves overtook the vessel in succession, which all rose above the present horizon; consequently they must have been more than 25 feet—probably about 26 feet—from ridge to hollow. From the larboard paddle-box, to which the Professor once more scrambled, he observed that occasionally four or five waves in succession rose above the visible horizon—hence they must have been more than 30-feet waves. He also observed that the waves no longer ran in long ridges, but presented more the form of cones of moderate elongation.

Having so far satisfied himself as to the height of Atlantic waves in a gale of wind (the Professor's estimate must not be taken as the measurement of the highest known waves, but simply as that of a rough Atlantic sea), he directed his attention to minutely and more difficult observations. He determined to measure the period of time occupied by the regular waves in overtaking the ship, their width from crest to crest, and the rate of their travelling. The first point to be known was the speed of the ship; this he ascertained to be nine knots. His next object was to note her course in reference to the direction of the waves. He found that the true course of the vessel was east, and that the waves came from the west-north-west, so that they passed under the vessel at a considerable angle. The length of the ship was stated to be 320 feet. From this information the Professor renewed his observations. He proceeded to count the seconds the crest of a wave took to travel from stern to stem of the vessel; these he ascertained to be six. He then counted the time which intervened between the moment when one crest touched the stern of the vessel, and the next touched it, and he found the average interval to be 16 seconds and a fraction. These results gave him at once the width between crest and crest. As the crest travelled 226 feet (or the length of the vessel) in 6 seconds, and 16 seconds elapsed before the next crest touched the stern, it was clear that the wave was nearly three times the length of the vessel. To write accurately, there was a distance of 650 feet from crest to crest.

The Professor did not forget that the oblique course of the ship elapsed her line over the waves; this elevation he estimated at 45 feet, reducing the probable average distance between crest and crest to 550 feet.

Being quite satisfied with the result of this experiment, the hardy Professor, still balancing himself on his giddy height, to the wonder and amusement of the sailors, found that the calculations he had already made did not give him

audience observe that "I am partially blind," he said: "yet I see James Hamlet, whose hand I hold. Yesterday he was a man for today he is a man. . . ."

"Where art thou? Where . . . ?"

handcuffs that were applied to his delicate arms? They are left behind in Baltimore to rust. I cannot but refer to that hell-concocted scheme of the fugitive Slave Bill. If the Hon. Mr. Seward was not a hypocrite, he would have uttered the sentiments of his mind, and say that the scheme was conceived in the bottomless pit which Millard Fillmore signed in Washington. I am sure that the man who had thought he withered up, and the neck of the slave before he committed so wicked an act. Hear, O Heavens, and give ear, O Earth; and ye infernal regions hear it, in all your subterranean caverns, that James Fillmore has signed that bill. Thank God there is a conscience in this and other cities of the Union that will yet wipe that bill from the statute-book! After suitable acknowledgments to the various abolition societies, and to the part they had severally taken in this question, Mr. Fremont proceeded—"I beseech you, Hamlet, take not flight to Canada, nor hide in the woods, but, if you are to perish, perish here. (Great shout.)" "I beseech you, fellow citizens, I ask, are not we who have tilled the soil, and developed the resources of the Empire State, citizens? ('We are, we are,') Anglo-American fugitives, you have received shelter and aid from the bosom of the bosom of the South. (Great sensation.) Can you deny it? (Many voices, 'They can't.' Black woman,—"I would take my oath of it." Great cheering.) The same vigour of sentiment and the same vigour of expression characterized several other speeches, and their reception was equally enthusiastic. Hamlet's heart was too full to speak, but he looked volumes. His wife and daughter proceeded, and, much to his relief, divided the assembly. As he sat, in the seat of the sable assembly, and, last, to the cry, "Rejoice, my people!" the meeting adjourned, and Hamlet was borne on the shoulders of his friends, through Broadway and down Broadway to the Williamsburg Hotel, where he was cheering, and shouting, and rejoicing.—*Times*, November 25.

A FUGITIVE.—It has been, not 100 miles from Boston, the living and present—great-grandfather, 1 grandmother, 1 father, 2 mothers, 5 sisters, 1 brother, 6 uncles, 3 aunts, 6 nephews, 6 nieces, 8 cousins, 6 sons, 6 daughters, 1 sister-in-law, 1 brother-in-law, 3 grand-daughters, 1 grand-son, 1 wife, 1 daughter, 1 son;—and there are only 15 persons in the whole.—*Halifax Guardian*.
